Hello Jenny,

Kathy is straight on point. The current Order on Consent does not require us to sample rain fed cisterns vs our original Multi-Media Order with WV that did, as at that time, we still emitted PFOA.

Andrew

Good Morning Jenny,

Yes, initially (2001-2002 time frame) we did sample some cisterns as we were developing the Washington Works conceptual site model for the migration of PFOA to off-site environmental media. However, because PFOA is no longer used at the site and there are no PFOA-bearing air emissions from the site, we have not been sampling rain-fed cisterns for PFOA. We will sample cisterns where water is added to the cistern is from a surface water source or ground water. If the cistern water is from a PWS that has been sampled, we will not sample the cistern. I believe that this is how we first identified and subsequently sampled Putnum Water, as it was the water source for cisterns in parts of NGA A and when identified, the PWS had not been sampled for PFOA.

Ali spoke with **Ex. 5 Deliberative Process (DP)** explained to Ali that the cisterns are rain-fed, Ali told her that we would not sample and explained why. At this point I do not see any justification to sample her cisterns for PFOA. Personally, I would be more concerned with bacteria issues due to these being open systems. Please let me know if you have additional questions.

Kathy

Hi Kathy,

May you please test Ex. 6 Personal Privacy (PP)/ Ex. 9 They have a series of cisterns and they are very worried about their water. I think you tested some cisterns before, right? Ex. 6 Personal Privacy (PP) (spelling?) and her home phone is Ex. 6 Personal Privacy (PP) Her cell phone is Ex. 6 Personal Privacy (PP)

Thank you,
Jenny
